

Uzumaru

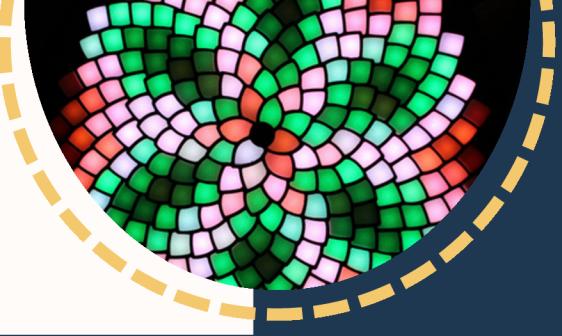

Power

Uzumaru runs off any USB-C.

It uses about 0.5A at 5 volts, so about 2.5W at max brightness.

Turning it on

The push button above the USB-C port turns it on and off.

Uzumaru

Uzumaru is controlled by one rotary encoder, backlit by an RGB LED.

With a single click you can cycle through the main control modes: brightness, animation speed and playlist. Each mode turns the knob a different color, shown in the diagram.

By rotating the knob you can control the selected parameter

In Playlist mode you can also doubleclick to stop or re-enable the automatic progression of the animation playlist
